SERVICE CASES

With quality, easy management and design in mind, we have developed a portable solution to organise your tools! It's called the Teng Tools Service Case and is an extension of the Teng Tools tool storage system.

Equipped
with a code
lock to protect
your tools!

Retractable
telescopic
handle makes it
easy to transport
the case

Case

- A moulded robust plastic body makes the case strong and stable.
- The transport castors are made of rubber making the case easy to pull and prevent it from sliding.
- The rubber feet mean the case does not slide around or damage painted surfaces.
- Carrying handles on the short and long sides to satisfy all needs.

Click Together

When you think of organising your workplace or garage it can seem like a hassle, but when you 'Get Organised' with Teng Tools it allows you to work better, faster and saves you money.

The Get Organised System has become the preferred choice for key industrial users and top motor racing mechanics who recognise that organisation is key to efficiency and success. This concept allows you to build the ultimate tool kit in 3 simple steps: 1. Choose your storage, 2. Choose your tool trays, 3. Click together – Get Organised!

Don't waste space with tools you don't need!
All tools are developed to fit the
Get Organised system so you can fill your
storage with a selection of tools to suit your
exact needs

HOW DO THE TRAYS FIT?
 CHOOSE THE TOOL TRAY SIZE BELOW TO
 FIT THE SPACE IN YOUR STORAGE:

Storing tools in hard to reach places and in an illogical manner can disrupt the workflow of any garage or workshop. The unique Teng Tools Get Organised System uses tool trays that click together to fit perfectly into your chosen storage solution. You do not have to waste time searching for tools anymore.

Every tool has its own specific place in your toolbox. You can rest assured knowing that any tool you need is easy to find and ready for the task whenever you need it. This creates a more efficient workflow and gives you more time to do what you do best every day.

SOCKETS & ACCESSORIES

The socket range includes drives from 1/4" to 1" and includes six-point sockets and twelve-point sockets, metric and imperial sizes as well as TX-E.

A wide range of bit sockets for six-point, TX and TPX is supplemented further by a range of adapters for use with the comprehensive range of bits, found in the screwdriver range.

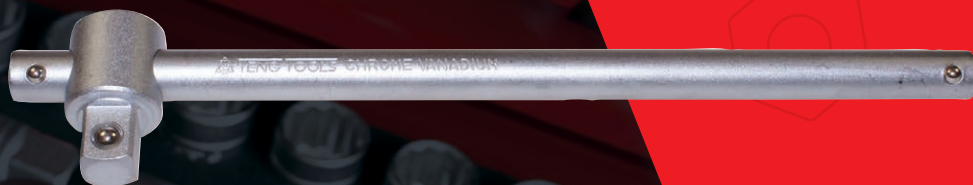

All sockets are produced according to Teng Tools "hip grip" system, which means the socket grips on the flat surfaces of the nut rather than on the corner. This system helps to prevent damage to nuts and bolts and makes it possible to grip nuts and bolts which already have damaged corners.

Made from
extra strong
chrome
vanadium
steel

Safety lock system on the $\frac{3}{4}$ " extension bars prevents sockets from loosening

- The range includes standard extensions and swivel extensions in lengths from 50 mm to 500 mm.
- Retaining grub screws are fitted to many accessories for extra safety when working in confined areas.
- 3 function adaptors that increase or decrease as well as including the possibility of a T-handle together with an extension bar.
- Screwdriver handle with square drive at the end of the handle to create a T handle that gives extra torque.

Don't lose your sockets! All sockets are supplied with a clip for use with clip rails.

All sockets are produced according to Teng Tools "hip grip" system, which means the socket grips on the flat surfaces of the nut rather than on the corner. This system helps to prevent damage to nuts and bolts and makes it possible to grip nuts and bolts which already have damaged corners.

IMPACT DRIVERS & BITS

**STUBBORN SCREWS + BOLTS
DON'T STAND A CHANCE!**

As a mechanic there is nothing more frustrating than wasting time and effort trying to loosen a stuck nut or bolt. Hand impact drivers are simple tools that work amazingly well for this task. Compared to a power impact tool there is far greater control with these models, they give greater access and they are so easy to use. If you can hold the tool and swing a hammer, then you can use this affordable impact tool!

After inserting the correct impact bit into the impact driver engage the stubborn screw or bolt. Apply downward pressure, while at the same time attempting to turn the impact driver in the direction you want the screw or nut to turn. Now the fun part! Whack the top of the impact driver with a hammer until the screw or nut is loosened enough to use a faster tool, such as a socket and a ratchet.

SPANNERS

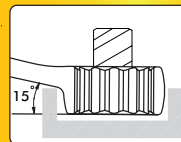

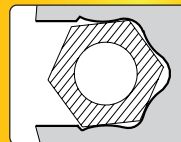

Our range has been developed over many years with DIN and ISO standards as the lowest benchmark when it comes to quality and size tolerances. This is a policy that has resulted in many top positions on best-buy lists in consumer and trade magazines. The range includes many different types of spanners for most application areas and personal taste. All spanners are available individually as well as in TT sets, tool pouches or wall racks.

Combination spanners

- Manufactured and designed in accordance with DIN3113A in high grade chrome vanadium steel.
- The ring head is offset 15 degrees to facilitate use even on flat surfaces.
- Teng Tools "Hip Grip" feature means the contact surface grips on the flat surfaces of the nut or bolt rather than on the corner. This helps to prevent damage and makes it possible to grip nuts and bolts which already have damaged corners.

"Hip Grip"

Anti-slip combination spanners

- The ring head is offset 15 degrees and is also countersunk so you can gain access in confined areas.
- The ring head is equipped with Teng Tools "hip grip" system that prevents damage to nuts and makes it possible to grip already damaged nuts.
- Hole in the handle for tool securing.
- The design of the shaft ensures an improved grip to avoid slipping and cause injury.
- The new design includes an anti-slip grip at the open end.

Anti-slip grip at the open end & an improved grip to avoid slipping

Ring ratchet spanners

- Ratchet spanners with 15 degree offset head for easier use against flat surfaces.
- Lever for quick reversing between left and right-hand action.

Ring ratchet spanners with flexible head

- Ring ratchet spanner with 180 degree flexible pivot to gain access to even the most hard to reach nuts and bolts.

72 teeth give an arc of 5 degrees for smooth operation

"Hip Grip"

Teng Tools "Hip Grip" feature means the contact surface grips on the flat surfaces of the nut or bolt rather than on the corner. This helps to prevent damage and makes it possible to grip nuts and bolts which already have damaged corners.

HEX KEYS

Teng Tools wide range of hex keys consists of a range of keys made of chrome vanadium steel for industrial use and a series made of chrome-molybdenum for heavy duty usage.

From standard keys and TX keys in chrome vanadium steel to extra-long and with ballpoint heads in chrome-molybdenum steel. In metric sizes from 1.5 mm up to a full 36 mm and in imperial sizes from 1/16" up to 3/8". They are available with a T-handle and in different sets.

In other words, here you'll find the hex key you need!

Available in
metric sizes,
imperial sizes
and TX

Standard keys
available
individually up
to 19 mm or 1/2"
and in TX

Chrome
vanadium steel
for industrial use
and chrome-
molybdenum for
heavy duty use

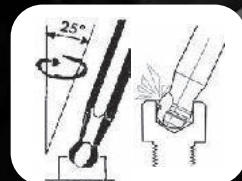

Hex keys with ballpoint heads

- Available in sets with metric sizes, imperial sizes and TX, with different options in terms of content and design, up to 10 mm.
- Up to 30 degree angle entry gives easy access, quick insertion and fast removal.
- Ergonomic as they permit a natural hand and wrist movement.

Folding sets

- Anodised aluminium handle and plastic cores ensure stability and comfort in combination with a low weight.
- A stop mechanism means the keys can be opened out individually up to 90 degrees for easy and stable use even under torque.

Ballpoint heads are ideal for areas that are hard to reach.

TORQUE TOOLS

Teng Tools torque wrenches have become an industry standard. Whether you choose the classic version that has been a favourite for many years or the new P-Series range designed for the industrial and maintenance sectors you are guaranteed quality, accuracy and reliability as standard.

Classic Series Torque

- Graduated in Nm & ft/lbs
- Lockable setting
- Manufactured according to ISO6789

All torque wrenches are supplied with a factory calibration certificate

Use a torque wrench to apply specific torque, not for tightening or loosening fasteners

Torque wrenches are supplied in a plastic case for protection when not in use

P-Series Torque

- Easy to read window scale
- Industrial quality grade steel tube
- Perfect for professional & industrial use
- Easy to recalibrate
- Preset torque with ease using the Teng Tools Safety Locking button

Torque wrenches are precision instruments that need to be serviced regularly

- Simple to use with 9 separate torque settings
- Can be pre-programmed for different torque tolerances before use
- Audio visual warning with an indicator light to ensure the correct torque
- Easy to read digital scale showing Nm, ft/lb, in/lb or kg/m readings
- Marked to show the correct place where pressure should be applied
- Twist locking facility to ensure the set torque is maintained
- Reversible 45 teeth quick release ratchet mechanism (DIN3122)
- Suitable for use on clockwise and anti-clockwise fastenings
- Accurate to +/- 1% and conforms to ISO6789 for assured accuracy
- Each torque wrench has it's own individual certification number
- Uses standard AA batteries for easy replacement
- Supplied in a handy storage case

PROFESSIONAL | RELIABLE | ACCURATE

All things that make Teng Tools torque wrenches the right choice for you.

SCREWDRIVERS

Unlike other brands the Teng Tools screwdriver blade has steel alloy wings that the plastic handle is moulded around. This allows for greater torque to be put on the screwdriver, ensures the blade is dead straight and stops the blade from moving in the handle.

What type of handle do I need?

The larger type of handle allows for more power and force to be executed with the driver.

The smaller type of handle make it easier to work quickly as less force is required with the driver.

Round Shaft | for extra speed

HEX Shaft | for adding extra torque

The round shaft is smooth for rapid hand movement and a spanner can be used on a hexagonal shaft for adding extra torque.

Always use the right type of screwdriver for the fastening you need to turn!

2 component grip handle gives better support, increased comfort and improved power transfer

Hole in the handle can be used in a fall arrest system, for storage and for use as a T-handle

The bi-material handle is designed for increased comfort and smooth action preventing blisters after continuous use. It gives better support and increased power transfer. The red resistant plastic is used for the core and ensures the blade is held securely and the soft black material prevents the screwdriver from sticking in the hand allowing for rapid movement.

CHOOSE THE RIGHT HANDLE FOR THE RIGHT TASK

A larger type of handle allows for more power and force to be executed with the driver while a smaller type of handle make it easier to work quickly as less force is required with the driver.

INSULATED TOOLS

All 1000-volt tools from Teng Tools conform to or exceed all specifications that the relevant authorities have established. Each tool is individually tested before it is marked with a special standard tag and a marking that indicates the year of manufacture.

The screwdriver shaft in the 1000 volt range is covered with two layers of insulation in different colours that make it easy to see whether the insulation is damaged. The blades are insulated before the handle is moulded, which makes the screwdrivers safer.

What are our insulated tools tested for?

- Insulation properties, i.e. resistance up to 1000 volts in dry or humid environments. ✓
- Resistance to the cold, i.e. how well the tool withstands the cold. ✓
- Durability, i.e. that the insulating handles do not come loose. ✓
- Resistance to fire, i.e. how well the tool withstands fire. ✓
- Insulating properties under pressure, i.e. how well the tool maintains its insulating properties when subjected to pressure. ✓

Pliers made from chrome molybdenum steel with an 80° cutting edge angle

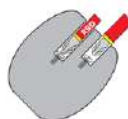

RBD shafts are ultra slim allowing for recessed screws to be accessed easily

Manufactured to the highest standard:

- IEC 60 900 is an international standard for testing tools designed for electrical work on the production line.
- DIN EN 60900 is a European standard drawn up in 1995 and which states that each individual tool must be tested with regard to insulation for 1000 volts.
- VDE is an independent authority that tests and checks tools with regard to construction, production and packaging. It is not the same as IEC 60 900 or DIN 60 900.

What are our insulated tools tested for?

- Insulation properties, i.e. resistance up to 1000 volts in dry or humid environments. ✓
- Resistance to the cold, i.e. how well the tool withstands the cold. ✓
- Durability, i.e. that the insulating handles do not come loose. ✓
- Resistance to fire, i.e. how well the tool withstands fire. ✓
- Insulating properties under pressure, i.e. how well the tool maintains its insulating properties when subjected to pressure. ✓

1000V

PLIERS

The extensive Teng Tools range includes pliers for most applications. In addition, the range includes the usual side cutters, combination pliers and slip joint pliers as well as a number of cable pliers, side cutters for cable ties, frapping pliers, nail nippers, electronic pliers, precision shears and tweezers. Two types of handles are available to choose from: slim rubber dipped as well as ergonomic TPR bi-material handles.

What is **TPR** grip?

- Ergonomic bi-material handle
- More comfortable in your hand
- Extra support when using greater force
- Lighter weight

Steel alloy
with CrMo
gives a
greater cutting
capacity

New slip joint
pliers have a
button for quick
setting of the
jaw opening

Slim design
allows for
greater access
in tight spaces

- The cutting capacity is laser marked next to the cutting edge – makes it easy to see which pliers you need to choose.
- The total length is designed to provide maximum leverage for each pair of pliers, irrespective of whether they are combination, water pump, flat or circlip pliers.
- The cutting edges on cutting pliers are especially angled to suit different materials and application areas.

POWER GRIP PLIERS

An extensive range of power grip pliers standard and tapered in a broad size range together with a wide selection of welding power grip pliers. All available with anti-pinch release arms.

Curved jaw for gripping objects like round pipes, square or hex bolts

Made from durable chrome vanadium steel for longer life

- Unique locking nut on the adjustment knob makes presetting the jaws possible for easier use when you frequently work with items of the same size.
- Wire cutter/crimp action integrated in the jaws.
- Choose between flat or rounded jaws on the most common power grip pliers.
- Choose between models with standard release arms or anti-pinch release arms.
